EPON Support

With this class of device, you need a PON (EPON) device which contains a built-in controller/firmware to make a SFP PON device behave as if it were a regular normal SFP device.

What Is the Difference Between PON and SFP Modules? Explained

PON and SFP transceivers are designed for different fiber network architectures--shared

access and dedicated point-to-point links. This guide explores their key differences in topology,

Through the extended OAMPDU, the connection request and response between OLT and ONU devices can be completed, enabling remote operation, maintenance, and management of ONU

EPON Module VS GPON Module: What Are the Main

Comparing EPON to GPON modules reveals fundamental differences shaping network performance. While both are common in fiber optic networks,
