Overview

- Verify that the IP address and subnet mask of the default-gateway are correct. A USB LAN Adapter is required to set up a wired internet connection when using a Nintendo Switch dock without a LAN port. I have a Catalyst 2950G-24 and after changing the Management VLAN I cannot access the switch on either the original IP or the new management IP and cannot ping either address. What's the best way to define the switch as being on VLAN 10, thus getting it's assigned IP from that DHCP scope?

Thanks in advance! We appreciate your feedback.
