The distribution box is placed directly on the ground

Overview

Choose the right box based on environment (indoor/outdoor), load capacity, and durability. It takes the incoming power and safely distributes it to different circuits throughout your building. According to the "Code for Acceptance of Construction Quality of Building Electrical Engineering" GB50303-2002, the vertical distance between the bottom surface of the fixed stainless steel enclosure ip67 and the ground should be greater than 1. Today, we're diving deep into the world of distribution box grounding, breaking down the standards, and shining a light on those sneaky mistakes that even experienced electricians sometimes make. 7 meters) high makes it easily accessible without the need to bend or stretch excessively.
