The function of the pigtail optical module

Overview

The fiber optic pigtail is a type of fiber optic cable with a pre-installed connector on one end while the other remains unterminated. The glass window on a diode laser not only transmits the light beam, but also forms part of the hermetically sealed package. Get the wrong connector type, the wrong polish, or skip proper fusion splicing technique—and you're looking at elevated signal loss, increased back reflection, and a.
