# **Uganda s bend-insensitive single-mode fiber**

## Overview

---

SDGI bending insensitive fiber has all the properties of enhanced single-mode fiber, is fully compatible with the G. 652D fiber, and has excellent anti-bending performance, especially at the wavelength region of 1600nm. The fiber, made of a germanium doped silica core and a silica cladding, complies with ITU-T G. A dual-layer acrylate is coated over the cladding to provide high product reliability and allows easy splicing. Manufacturers liked to demonstrate this fiber by bending it around impossibly small bends or stapling it to a piece of wood - demonstrations that made veterans of the business cringe at. The International Telecommunication Union (ITU-T), a UN agency that formulates standards for telecommunications and information technologies, divides single-mode fibers into six categories of G.
