Upper Layer Links of Aggregation Layer Switches

Upper Layer Links of Aggregation Layer Switches

Layer 3 Link Aggregation

In this example, 3 links are configured between the two switches R1 and R2. These three links are assigned the same administrative key (1) so that they aggregate to form a single channel 1.

What are Link Aggregation Groups (LAGs) and how do they work

What are Link Aggregation Groups (LAGs) and how do they work with my managed switch? Link aggregation lets a switch treat multiple physical links

LANCOM Tech Paper Two-Tier and Three-Tier Switch Architectures

Core-layer switches make up the top layer or core of the network. The aggregation or distribution switches are the intermediary layer between the core and access layers. The lowest tier is the
