What are the network brackets on the server rack

Overview

Server rack rails are metal brackets or frames that mount and secure servers within a server rack or cabinet. A server rack is a metal frame that holds and organizes your IT equipment—like servers, switches, and power supplies—all in one place. It keeps things tidy, improves airflow, and makes it easier to manage and troubleshoot your setup. Caution - The server weighs about 180 pounds (100 kg) when fully loaded with components.
