What is a branch fiber optic cable fault

Overview

Visible cracks, flattened jackets, sharp bends, dirty connectors, and corroded ferrules are typical indicators of cable damage. Branch optical cables, also known as distribution optical cables, are used to distribute fiber optic signals from a main cable to individual devices or endpoints. Maintenance personnel can refer to this document for step-by-step troubleshooting when dealing with faults arising from the following. Fiber optic cables are the backbone of modern communications, delivering high-speed data over long distances with minimal loss. However, when these delicate fibers are bent, crushed, or exposed to harsh environments, the light signal weakens — resulting in high insertion loss, poor stability, or complete link failure.
