## Overview

---

Surplus fiber is new fiber cable that has never been installed, but typically has been sitting in a warehouse for some time. A fiber-optic cable, also known as an optical-fiber cable, is an assembly similar to an electrical cable but containing one or more optical fibers that are used to carry. Centrally located in Peoria, Illinois for shipping advantages, Wire Direct uses a vast network of sources to bring you the best pricing & quality available. There are different types of fiber optic cables because each type is optimized for specific applications that have unique requirements for bandwidth, transmission distance, and environmental factors. Unlike copper wires, which are limited by lower data transmission speeds, shorter transmission distances, and higher susceptibility to electromagnetic interference, fiber optic cables offer unparalleled performance and can cover much greater distances without bumping up against signal degradation.
