What kind of adhesive is needed for optical modules

Overview

Optical cements, sometimes called optical adhesives, are made to join optical parts. Optical adhesives are supporting advances in optical assemblies, collections of optical components and mechanical parts that precisely manipulate light for focusing, imaging, and beam shaping. From bonding lenses and coupling fibers to sealing photonic packages and aligning micro-optics, these. Optical grade epoxies, silicones, and UV curable compounds provide solutions to engineers for bonding, sealing, coating, and encapsulating in fiber optic and optoelectronic applications, as well as in other demanding areas such as medical, military, and aerospace systems.
