What size holes are needed in fiber optic cable junction boxes

Overview

Handholes also known as telecom vaults or joint pits, are necessary for a fiber optic network route along its length to access the cable at periodic intervals. It serves as a central point for organizing and distributing optical fibers, ensuring efficient connectivity. Do I need to size a pull box on the exterior of the building that is for fiber optic cable per 314?

What I have is a 4" conduit coming out of the ground and entering a pull box on the exterior of the building. Size and Dimensions: The box should have sufficient space to accommodate the necessary components, such as fiber terminations, splices, and slack storage.
