What to do if the bottom of the network cabinet is loose

Overview

Any way you can run the cables through the wall from the networking cabinet into the main cabinet to the right, and store all of your networking gear in there?

Mount the router to the wall above wires door from the outside and drill some hole through the door for the cables. Network hardware failures can cause connectivity issues, slow performance, or complete network downtime. Faulty routers, switches, cables, or network interface cards (NICs) can disrupt communication, suitable to business interruptions and reduced productivity. For example, tangled patch cords, missing labels, loose slack, tight bends, and unclear cable paths can slow down routine work.
