Which type of optical cable is more expensive

Overview

And due to the increased material and manufacturing complexity, fibre cables with more optical fibers typically have higher costs. Copper cables, primarily Cat5e, Cat6, Cat6a, and Cat7, have a well-established manufacturing process, leading to generally lower per-foot costs compared to fiber optic cables. Fiber-optic cable materials typically cost \$1 to \$6 per linear foot, depending on fiber count and cable type. Single-mode fiber costs less per foot than multimode fiber, but it requires more. And between the different types of fiber cables (drop fiber optic cables, outdoor fiber optic cables, indoor fiber optic cables, special fibre cables, etc. Here's a general pricing reference: These are indicative prices based on standard configurations.
